

## Latin America to reach 91.1 million fixed broadband accesses in 2023

Dataxis latest research revealed that almost **20 million new accesses** will be added within the next five years. Consequently, the penetration of the service in 2023 will reach **46% of households**.

Dataxis notes that very high-speed broadband options have already gained critical mass. In 2017 they represented **36% of the accesses** and it is expected to reach **75.5% in 2023**.

Furthermore, Dataxis latest research highlights a rapid process of replacing DSL, the dominant technological option until 2017. **DSL exhibited a 48% share and in 2023 it will fall to 29%**. The **Cable Modem** will be imposed as the option with the highest volume representing **43% of the accesses**, followed by the **Fiber Optic with 28%**.

**Broadband Connections**  
(Latin America)
